

Vendor management is a simple and complex process. Simple when number of vendors is less; and complex when it increases and are located across geographies. To simplify this herculean task, we have created a simple, but powerful software to manage, monitor and utilize vendors in an efficient way.

FEATURES

- ➔ The application being web based can be accessed from anywhere via internet (i.e. for more security VPN can be used)
- ➔ Dashboard showing the graphical representation of various data relating to vendor selection, location on map, and more
- ➔ The users can easily change their password to avoid security lapses; change no. of data rows in the result pages for more or less viewing; export data to PDF/Excel sheets and more.
- ➔ Easy front end user access rights/privileges configuration by non-IT personnel
- ➔ Vendor information like their contact, selection/evaluation sheets can be printed for hard copy reference
- ➔ Administrator can assign privileges and form teams for selecting and evaluating vendors
- ➔ Privileged users can evaluate and approve or reject new / existing vendors
